

## Lufthansa Technik Malta

**Lufthansa Technik Malta (LTM) started operations in 2003 as a joint venture between Lufthansa Technik (92%) and Air Malta (8%). Based at Malta International Airport in Luqa, the maintenance, repair and overhaul (MRO) company offers its customers line and base maintenance services for Airbus and Boeing narrowbody and widebody aircraft.**

### Service spectrum

Initially specializing in C-checks and extensive aircraft modifications, the company has meanwhile significantly expanded the range of services offered following the construction of a hangar complex amounting to a total of 61,000 square meters of floor space. Today the range of services Lufthansa Technik Malta offers includes structural work, the repair of composite materials, stamping, rectification of malfunction reports, interior work and aircraft painting. Lufthansa Technik Logistik Services also runs a local operation under the umbrella of Lufthansa Technik Malta.

The Lufthansa Technik Malta facility employs over 650 personnel, approximately 150 of which have completed aviation related training at the acclaimed Malta College of Arts, Science and Technology (MCAST), with a further group of MCAST trainees undergoing on-the-job training on the shop floor.

### In focus: Narrowbody and widebody overhaul

At present, the facility operates three narrowbody and two widebody aircraft overhaul lines providing line and base maintenance services for the Airbus A320, A330 and A340 as well as the Boeing 737 aircraft types. In addition, the "old" hangar is primarily used for far-reaching structural modifications on aircraft of the Boeing 737 Classic family.

### Outlook

Thanks to its strategically favorable location in the Mediterranean close to the African continent and the Arabian Peninsula, and the significantly expanded service spectrum, Lufthansa Technik Malta is well equipped for the future. Given its high quality standards, cost efficiency and the minimal turnaround times achieved, Lufthansa Technik Malta will be able not only to consolidate its competitive advantage, but to expand further in the future as well.

### Key facts

Founded	2002
Personnel	650
Capacity	61,000 m <sup>2</sup>

## Aircraft Services

### Line maintenance

- A319, A320, A321
- 737 CL, NG
- A330, A340

### C-checks

- A319, A320, A321
- 737 CL, NG
- A330, A340
