

Lufthansa Technical Training

Lufthansa Technical Training is a leading training provider for all staff employed in maintenance, repair and overhaul organizations (MRO) and beyond. From vocational training, basic technical training and type-related further training to management training and consulting services all important areas of personnel development are covered.

Service spectrum

Lufthansa Technical Training stands for modern training and personal development with quality based on experience. The vocational training courses form the foundation stone of the portfolio. On top a wide program of basic training, covering aerodynamics, structures, aircraft systems and similar items, makes trainees familiar with the fundamentals of aircraft technology. Due to Lufthansa Technical Training's independency from manufacturers, maintenance training is offered for all popular Airbus, Boeing and Bombardier aircraft. Specific expertise on engine, airframe and component overhaul training is provided in Lufthansa Technical Training's worldwide network. All popular engines produced by the manufacturers CFM International, General Electric, International Aero Engines, Pratt & Whitney as well as Rolls-Royce are covered. Continuation training is available through a worldwide network of cooperative alliances and subsidiary companies. The training portfolio is completed by management training, aimed at sharpening the skills of decision-makers concerned with production and organization, and finally consulting services. Here, Lufthansa Technical Training advises and supports aviation companies, maintenance and training organizations on how to optimize their training and skill-upgrading systems as well as related processes.

In focus: Bringing people and technology together

Safety, reliability and efficiency are decisive factors for success in aviation. This is true in particular for work in the maintenance operations. Here the foundation stone is laid for safe and cost-efficient flight operations. Due to the high complexity of the tasks involved, employee qualification and attitude are a key success factor. Therefore skill-upgrading measures and regular training are of utmost importance for staff and technicians. Lufthansa Technical Training's courses unite more than 50 years of experience from one of the world's biggest maintenance operations with the expert knowledge from 50 years of work in the training and development of technical aviation personnel. State-of-the-art training methods are kept in line with the latest technical and statutory requirements, scientific findings and educational methods. Within the framework of the official requirements Lufthansa Technical Training will precisely tailor all training programs to customer specifications and needs. By ensuring that all parties involved in the maintenance process perform up to the highest standard, Lufthansa Technical Training makes a decisive contribution to successful and efficient flight operations.

Outlook

To enhance training quality beyond simply meeting the current and future quality and procedural standards, Lufthansa Technical Training not only anticipates the MRO world of tomorrow. It is also continuously working on proprietary programs. Products such as the Human Factors Training aim at eliminating the last element of risk in MRO as far as possible, making the best of the most valuable resource in MRO – people.
