

# Detmol

Disinsection made easy

In many countries, local health authorities require disinsection for aircraft entering the country from destinations where diseases that are spread by insects occur – malaria, yellow fever and others.

Lufthansa Technik offers the perfect solution for aircraft to eliminate insects on board in an environmentally friendly way, without affecting aircraft components. The newly developed product line Detmol is easy to use and complies with current insecticide regulations as well as WHO recommendations.

The short-term disinsection (“preflight”, “blocks-away” or “top-of-descent”) can easily be performed by ground or cabin staff. Long-term disinsection (“residual treatment”) must be carried out by a trained pest control specialist. Lufthansa Technik cooperates closely with our experienced partner Akut SOS Clean, which offers application services for all aspects of long-term disinsection.

## Key facts

---

Detmol product line for both long-term and short-term disinsection of aircraft

---

CO<sub>2</sub> propellant

---

Water-based

---

Compliant with all WHO recommendations and other current regulations

---

AMS 1450A and Boeing D6-7127 certified

---

Application both in the cabin and in the cargo hold

---

## Benefits

---

Virtually solvent-free

---

Consumption reduced by up to 90%

---

Aircraft material and environmentally friendly

---

Free of misting additives

---

Lufthansa Technik

## Detmol at a glance

### Detmol for long-term disinsection is available in:

---

200 ml spray can Detmol Bio.A (AE) [20 m<sup>2</sup>]

---

10 liter liquid canister Detmol Bio.A (L) [1,000 m<sup>2</sup>]

---

### Detmol for short-term disinsection is available in:

---

100 ml spray can Detmol Pheno (AE) [285 m<sup>3</sup>]

---

200 ml spray can Detmol Pheno (AE) [570 m<sup>3</sup>]

---

### Keeping insects at bay – without harming the aircraft interior or the environment

Due to the newly developed and unique spray can system Detmol is currently the only water-based product that is practically solvent-free and contains no misting additives.

Long-term studies in Lufthansa Technik's materials laboratory confirm the material compatibility of the Detmol products.

With the newly developed Detmol product range Lufthansa Technik offers a future-proof insecticide for the global market.

Detmol is part of the AeroX product family, which offers a wide range of disinsection and disinfection products and related services.
