

## Consulting for Tooling & Equipment

**When it comes to selecting the right tools for aircraft maintenance and consultancy on the most efficient way to equip a maintenance facility, Lufthansa Technik's Tool and Equipment Engineering is the partner of choice.**

### Description

Lufthansa Technik is the right partner for any aviation company facing the challenge of adding a new aircraft type to their aircraft maintenance portfolio or setting up a new MRO facility. If you are looking to build up additional capacity or further expertise, our tooling and equipment specialists will be happy to provide guidance and support to your project team.

Lufthansa Technik's tooling specialists have decades of experience in the selection of aircraft maintenance tooling and the fitting out of maintenance facilities. Based on our expertise from aircraft maintenance and day-to-day support for fleets of every size and composition, we are in the optimum position to ascertain your requirements and, working with you, to draw up a solution tailored to your needs. We can advise you on all the pertinent issues as they relate to your specific business, taking into account the legal requirements in the fields of aviation, health and safety at work and environmental protection.

Lufthansa Technik's Tool & Equipment Engineering will help you select any additional tools necessary and integrate them into your system and processes. If required, we can also carry out an assessment of your existing tools, on the basis of which you can optimize your tool selection. Last but not least, you can trust Lufthansa Technik not just over the selection of the right tools but also to take over management of the project for you as well. Here we will take into account not just the technologies that point the way to the future but qualitative and economic considerations as well.

### Tool and Equipment Engineering

Tool and Equipment Engineering is part of the Lufthansa Technik Design Organization (EASA 21/J). The department is approved to design maintenance tools for the commonest aircraft types and can offer you approved and certified alternatives to OEM tools and equipment.

### Customer advantages

- Solutions that comply with the pertinent legal requirements
- Objective analysis and assessment
- Decades of engineering experience
