

Lufthansa Technik Puerto Rico

Lufthansa Technik Puerto Rico, a wholly-owned subsidiary of Lufthansa Technik AG, joins Berlin, Shannon, Budapest, Malta and Sofia as a new Lufthansa Technik Group site. The company offers maintenance and overhaul services for narrowbody aircraft in the Americas.

Up and running since July 2015

Less than a year after ground-breaking, Lufthansa Technik Puerto Rico inaugurated its facility in July 2015. Approved according to FAA Part 145 and EASA Part 145, about 320 highly qualified employees are working in this modern facility with a total shop area of 20,000 m². A second overhaul line became operational in November 2015. In 2017, the company achieved its final configuration with five maintenance lines.

American MRO provider

Lufthansa Technik Puerto Rico specializes in MRO services (maintenance, repair and overhaul) for the Airbus A320 range of short- and medium-range aircraft. By choosing this location, Lufthansa Technik has addressed the needs of customers from North, Central and South America. Thanks to the geographic location of Lufthansa Technik Puerto Rico on the western edge of Puerto Rico, the maintenance facility is within flying distance of all Airbus A320 family aircraft operating in the Americas, thus fulfilling all customer needs in the region.

Promising future

The regional demand for comprehensive maintenance and overhaul services will continue to grow over the coming years. Using the latest technology, one of the new facility's lines offers the possibility to perform aircraft painting and maintenance in the same bay, saving time and costs. The combination of short layovers and superbly trained mechanics and engineers enables Lufthansa Technik Puerto Rico to deliver exceptional quality at competitive prices.
