chair™ – not just another seat

The time is right for a revolution in seating. After decades in which VIP and business jet seating only changed its shape or color, passengers want something new at the highest level: the comfort and convenience of the most innovative cabin along with the wealth of options they know from home furnishings and more room to move freely in the cabin. So Lufthansa Technik, as a market-leading VIP interior solution provider, has bundled its exceptional expertise and ideas with the creativity of a highly renowned aircraft interior designer to develop chair™: space-saving, modern, lightweight, and individually adaptable in design.

Designed for the most discerning taste

chair™ is not just another seat, it's the aviation-certified 16g base for a whole family of seating applications. It is a synthesis of German engineering and manufacturing with a top French design created by Pierrejean Design Studio. chair™ offers VIP aircraft owners and their designers a virtually unlimited range of possibilities for adapting cabin seating to the real needs and tastes of passengers. Made in Germany in cooperation with a premium automotive supplier, all chair™ configurations are based on a seat frame developed in bionic harmony with the human body and an extremely slim load-bearing primary structure. Individually sized ribs, customized upholstery of every thickness, back rests in different heights, ergonomic functions such as leg and arm rests and a variety of other flexible add-on elements produce a hitherto undreamed-of variability – or when was the last time you sat in an aircraft seat you could rock?

More room for you

Less is more, especially in an aircraft, where space is at a premium. Finally interior designers can not only select the perfect seat configuration for every cabin floor plan. Because chair™ enables greater freedom of movement in the most literal sense of the word, they can actually create the floorplan their customers are dreaming of. For example, a spacious conference table is now possible even in a narrowbody jet – surrounded by crashworthiness-compliant (16g certified) chairs scaled precisely for this setting and purpose.

Aircraft seating for the future

With its new design and cabin layout options, global technical support from Lufthansa Technik, and backed by first-rate manufacturing capacities, chair™ meets every requirement for becoming a design classic of the next generation of aircraft furnishings. Come fly with us into a future of new creative freedom on board.

“This chair is my friend. It wears a different cover depending on the comfort I need, the situation I’m in and the culture I live in. The concept of chair opens up an unequaled degree of freedom for cabin interior designers.”

Lounging, meeting, working and sleeping – just four applications of chair™ for greater comfort on board.

The aviation approval and crashworthiness of the space-saving chair™ structure opens up new options for the cabin floorplan.

chair™ features:

- Saves weight and space
- 9g/16g tests validated
- New levels of comfort
- New functionalities such as “active seating”*
- Flexible and adaptable
- Unlimited design and layout possibilities

* Patent and certification pending
