

Lufthansa Technik Logistik Services

Lufthansa Technik Logistik Services is a leading provider of logistics solutions for the aviation industry. Having emerged as an independent company from the former material management of Lufthansa Technik in 1998, Lufthansa Technik Logistik Services today provides material support for over 750 customers and a fleet of around 1,500 aircraft.

Service spectrum

Lufthansa Technik Logistik Services offers a wide spectrum of services for the aviation industry. Its portfolio ranges from transport management including routine transport, engine transport and AOG shipments, to complete warehouse management, along with aviation-specific solutions for inventory management, customs clearance, certificate handling, tool management, kitting and material handling.

Choosing Lufthansa Technik Logistik Services guarantees immediate access to an extensive stock of consumables and expendables. Furthermore, due to the company's well-developed supply network, material requirements exceeding the standard material spectrum can be satisfied quickly and reliably. And of course Lufthansa Technik Logistik Services' communication network linking customers, spare parts suppliers, logistics partners and repair workshops is supported by state-of-the-art Internet-based tools.

In focus: Customer-specific logistics solutions

As well as efficient warehouse and transportation logistics, Lufthansa Technik Logistik Services' foremost capabilities are the planning and implementation of comprehensive, customer-specific logistics solutions for the maintenance and repair of aircraft and equipment.

The precise, on schedule management of individual orders for global overhaul events in combination with a minimum planning horizon calls for integrated systems and processes. Therefore Lufthansa Technik Logistik Services is the integrated partner right from the planning stage of an MRO event, and draws on its own aviation know-how to develop optimized provisioning concepts and procurement strategies taking transport flows and warehousing into account.

By selecting Lufthansa Technik Logistik Services as a single-source logistics provider, existing synergies are fully utilized. This ensures that customers truly enjoy the very best in logistics performance.

Outlook

As the strategic and operational logistics partner of Lufthansa Technik, Lufthansa Technik Logistik Services will continue to expand its global network and develop new markets. To further advance its position, the company puts substantial effort into future projects. One example is the use of RFID technology, which the company has begun for rapid acceleration for material flows. Furthermore, the German customs authorities have awarded Lufthansa Technik Logistik Services the status of 'Authorized Economic Operator (AEO)', underlining the company's standing as one of the leading aviation logistics providers.
