

AOG help desk in Dubai

Speedy and reliable AOG support

If an aircraft is grounded for technical reasons, Lufthansa Technik helps in the shortest possible time. Beyond quality and safety, speed and adherence to delivery dates are the keys to successful aviation logistics. Lufthansa Technik's AOG services are your single point of contact for speedy, reliable support.

Direct contact in the Gulf region

To directly support airlines within the Gulf region, Lufthansa Technik Middle East has established an AOG help desk in Dubai. Specialists work around the clock in the planning and coordination of material and parts supply. Whether you need single components (Single Component Availability – SCA) or consumables and expendables (C&E), the solution to your AOG request is only one call away.

**Close to you,
far from ordinary**

Lufthansa Technik in the Middle East

A world of services at your doorstep

As a global group of companies with a highly flexible network of locations and facilities throughout the world, Lufthansa Technik is never far away from your maintenance, repair and overhaul needs. In response to the growing demand for on-site technical services and to be even closer to its customers in the region, Lufthansa Technik Middle East in Dubai today bundles all the company's technical services and sales activities for the strongly growing Middle Eastern aviation market, on an area of 5,000 square metres.

Local capabilities and on-site support

To serve our airline and VIP customers in the Middle East, we have built up local capacity for component services and Cycleclean® engine washes. With the facility in place, local spares support and material availability are offered to customers in the region. The shop in Dubai is also the local address for the repair of nacelles and composite structures. In addition, Lufthansa Technik Middle East is planning to further expand its on-site line maintenance services, starting with narrowbody aircraft and gradually covering all Airbus and Boeing fleets.

Airframe Related Components (ARC®)

Nacelle and composite services

The Airframe Related Component (ARC®) experts of Lufthansa Technik are true masters when it comes to handling the complexities of aircraft composites. Lufthansa Technik has both the necessary experience with all modern commercial aircraft types and close working relationships with all the relevant manufacturers. ARC® customers profit from a state-of-the-art infrastructure and the strength and experience of a highly qualified workforce.

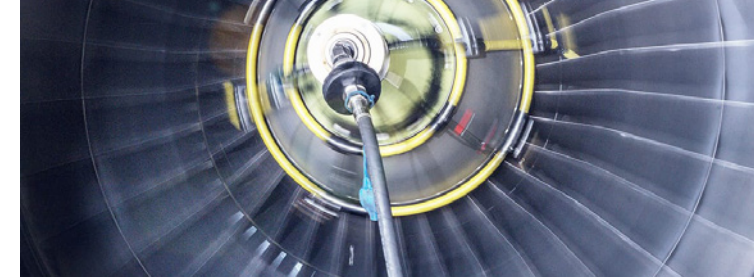

ARC® workshop in Dubai

Complementing the worldwide network, the ARC® shop in Dubai offers aircraft operators direct regional access to Lufthansa Technik's renowned experts in composites and bonded structures. In addition to shop capabilities for smaller repairs, an ARC® pool makes CFM56-5B and GE90 spare parts as well as Boeing thrust reverser, translating sleeves and radomes for the Boeing 777 available. Dubai also is a regional home base for Lufthansa Technik's dedicated mobile Airline Support Team (AST® Nacelles & Composites). We also offer full capability for GENx-1B inlet cowls, GE90, CFM56-5B and V2500.

ARC® shop capabilities in Dubai:

- Inspection/assessment (e.g. lease return inspections)
- Bolted doubler repairs
- Composite and metal bond repairs
- Repairs using resistance spot welding, e.g. repairs of thrust reverser thermal blankets

Cycleclean® Engine Wash

Engine washing quickly and easy

Lufthansa Technik's revolutionary engine washing technology, Cycleclean®, is now also available locally for customers in the Middle East. Lufthansa Technik provides engine wash services at its facility at Dubai International Airport as well as at the airports Dubai World Central and Sharjah. Proven by more than 40,000 successful washes, Cycleclean® enables aircraft operators to clean their engines very quickly and easy. This product offers substantial time and cost savings and is an efficient way to make optimum use of the engine life cycle. With the latest generation of Cycleclean®, engine washes are performed in less than one hour per engine and generate fuel flow savings of up to 1 percent.
